

SMOKE_ALARM

About :

Pluto drone is equipped to detect smoky environment and alarm everyone about it. This application can be useful to detect fires in places with less human presence.

Add-On used :

The MQ-6 is a gas sensor used to detect smoke and flammable gases such as LPG, propane, and butane.

Components and Connection:

Pluto drone, MQ-6, buzzer and connecting wires.

Connect the MQ-6 sensor on the ADC port of Primus V5/X2 board
Connect buzzer on RC port of Primus V5/X2.

Primus V5/X2 pin	Peripherals
VCC on ADC port	VCC on MQ-6
GND on ADC port	GND on MQ-6
Signal on ADC port	A0 on MQ-6
GND of RC port	GND of Buzzer
Signal of RC port	VCC of Buzzer

How does it work?

Think of the smoke sensor like a switch:

- **No smoke → Sensor output = HIGH (1)**

- **Smoke detected → Sensor output = LOW (0)**

The program continuously checks the sensor:

- If smoke is detected → **Buzzer turns ON**
- If no smoke → **Buzzer stays OFF**

PlutoBlocks

Working:

Initially, we set Receiver mode as ESP and GPIO_1 to low so that buzzer kept off at start.

When loop starts executing it constantly checks on if MQ-6 has sensed any smoke or not. If it has, it beeps the buzzer otherwise the buzzer remains silent.

Moving further

Try making some sound using buzzer when smoke is detected
